

## AVM integrate conferencing solution into University of Exeter Innovation Centre

### Background

Situated on Exeter University's Streatham campus, the growing Innovation Centre provides flexible units, purpose designed for high-tech businesses undertaking research and development. Current business tenants operate within the biosciences, environmental, IT and advanced manufacturing sectors. Each unit has high specification telecom and IT systems. Other services supplied include video

### Solution

There was over 2,000 square feet of unused space within the conference centre and meeting rooms. The Innovation Centre needed to provide audio visual and video conferencing services for their clients, both tenants and external organisations using the facility.

### Outcome

AVM provided technical and consultation services from early on in the project. Room size, location, possible use, budget, timescales and ease of use had to be considered throughout the design stage.

---

**“AVM understood our needs, were flexible and creative in their approach to design, and produced a first class solution to our needs in a timely and cost effective fashion.”**

*Robin Jackson, Innovation Centre Director*

---

### Benefits

- Helps growth of the local area, by offering conferencing and services to smaller businesses.
- Multi-purpose suite providing multiple sources and services.
- Low maintenance solution.
